

Scumback™ H75-LHDC

The classic British guitar tone from the 60's through the 70's.

A hybrid design for new tones. Take an H75 but use the G12-65 style cone with a large dust cap and you get the Scumback H75-LHDC. More bass than the H75, with a silkier high end response, not quite as sharp as the H75 by itself. The silkier high end is great for the D-tone amps, open back Blackface combos and for those looking for the ultimate high gain speaker. Also great for single coil guitars who want more bass.

Specially treated 75hz cone sounds 20 years old.

50 oz magnet, 1.75" voice coil, 12" wide.

Available in 30, 65 & 100 watt HP power handling.

Pre Rola style doping just like the originals.

8 bolt pattern allows mounting to most amps.

This speaker is like a strong G12-65 model.

12-1/8" (30.79cm) diameter, 5-3/8" (13.67cm) deep, 8.5 lb (3.85Kg) .
